

Controversial hydraulic project in coastal Uruguay: conflict around privatization and lack of social participation

Natalia Dias Tadeu, Micaela Trimble, Marila Lázaro

Context

60% of Uruguayan population live in the Metropolitan Region

Santa Lucía River Basin is strategic because it is the main water source

Several problems relate to water quality (agriculture, livestock, industries)

Hydraulic project in discussion (“Proyecto Neptuno”)

Constitutional Reform (Article 47) - 2004

Impacts

Eutrophication and salinity in the Rio de la Plata

Loss of vegetation, fauna and alterations of coastal dynamics (beach loss)

Water management

Low control over activities upstream of water intake (Mercosur agreements)

Low transparency about the project

Risk of discontinuity and non-monitoring of the recovery measures for the Santa Lucía river

Water policy

Discussion in formal forums (e.g., basin committees and regional council / (“Mesa de Trabajo” or “Work group”))

Constitutional reform

Prioritization of investment in hydraulic projects

Final considerations

- Insertion of new actors in the sociotechnical water network (private sector)
- Persistence of low transparency (access to information)
- Creation of new spaces for participation
- Risk of "consultative" participation (not taken into account in decision making)
